GREAT BEGINNINGS CLOUD MIGRATION CASE STUDY

About the Company

Great Smiles and Great Beginnings (GSGB) is a Dental Service Organization (DSO) with seven locations and over 120 employees. They are the only provider in Western North Carolina that offers both pediatric dentistry and orthodontic specialty care for children, teens, and adults.

The Challenge

GSGB desired to have a modernized dental practice management software that allowed full administrative control and data analytics. Existing SaaS dental software options were not good at delivering both. HIPAA compliance, data durability, and accessibility are also firm requirements for this new system. GBGS, faced with a complex and potentially costly endeavor, coupled with zero tolerance for downtime, partnered with IRIS for a better solution.

The Solution

IRIS designed, built, and deployed a comprehensive cloud solution exclusively leveraging AWS services. As a result, GBGS was able to test performance and function in a cost-efficient manner without any impact to their production environment. Once satisfied, the entire organization was migrated to the new environment with zero downtime.

The Benefits

Robust Access

Dentists, Practice Managers and other practice employees have greater flexibility and security accessing sensitive data outside of the office.

Highly Durable and Available

Leveraging multiple EC2 instances in different availability zones removes any single point of failure.

Reduced Expenses

All of these benefits come at a cost savings over the previous, traditional environment.

About IRIS

IRIS is the leading provider of technology services for dental practices and other HIPAA-regulated organizations throughout the U.S. We help Dental Service Organizations (DSOs), medical groups, and other HIPAA-regulated professionals modernize, protect, and streamline their entire technology system, including phones and unified communications, practice management, and business analytics.
